

Custom Query String 2.7

Saturday, January 14th 2006

[CQS 2.7](#) is out. This version is **only for WordPress 2.0**

. Not much has changed, the admin layout is a bit different, and the Delete all button has been replaced with a check all button. Other than that it pretty much the same.

So now stop bugging me to update. Just kidding, I should have updated long ago.
